REDEFINING POOL PERFECTION

MOSAIC | TILE

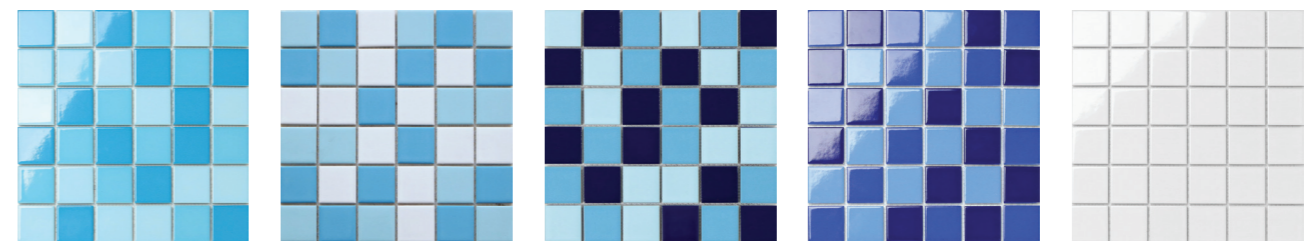

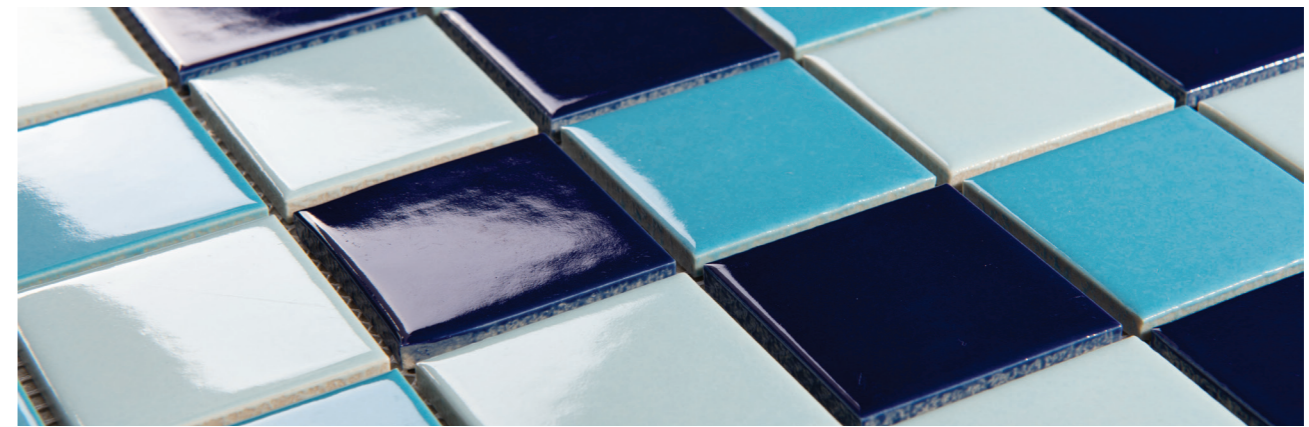

Montile Porcelain Stoneware is a premium material renowned for its exceptional durability and sophisticated aesthetic appeal. Its versatile nature makes it ideal for a wide range of applications, including outdoor and indoor flooring, wall coverings, terraces, porches, swimming pools, water features, and other exterior spaces. Designed to withstand the challenges of the elements and daily use, this material maintains its color, texture, and visual elegance over time, ensuring lasting beauty and performance in any setting.

Mosaic Installation Guide

To achieve best result of the product, we recommended the following installation guidelines.

1. PREPARATION OF LAYING

Before starting the laying procedure, open several cartons to check the contents of mosaic to make sure all are in acceptable size and colour shade.

2. SURFACE CLEANING

Ensure that the receiving substrate is clean and free from contamination (e.g. Grease, Oil, Waxes) that may affect the adhesion of the adhesive. It must be level, plumb and true to a tolerance in a plane of 3mm in 3m. The rendering should be completed at least 14 days before tiling begins, in addition, the prepared surface should be dry to receive the mosaic.

3. APPLICATION OF LATEX-MODIFIED

To ensure optimum results, apply good quality latex-modified adhesive thick enough to prevent the mosaic from slipping and compatible with your substrate.

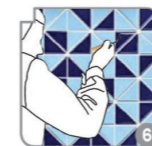

4. PROTECTION WHEN LAYING

To protect the working area from rain and direct sunlight during the installation, special care must be taken to make sure the surface being covered and has no contact with water for at least 20 days after laying has been completed.

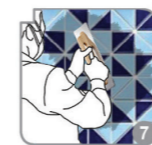

5. LAYING

When laying mosaic in sheet form, please ensure all the mosaic gaps are uniformed and consistent.

6. ADJUSTING THE GAP FOR MOSAIC

Align sheets as you move across the field, do not wait until all sheets are installed than only begin to straighten the joints, or the thinnest will begin to dry before alignment can be done.

7. PREPARATION OF GROUT & GROUTING

It is recommended to use quality grouts with high polymer contents and/or epoxy grout for mosaic installation. We suggest using light colour grout for brighter finishes. Using a dark colour grout might give the overall finishing a darker shade. Please refer to adhesive manufacturers guidelines for mixing and fixing method. Using hard trowel to fill the joints completely with the grout. Spread the prepared grout at 45 degree angle diagonally across the field.

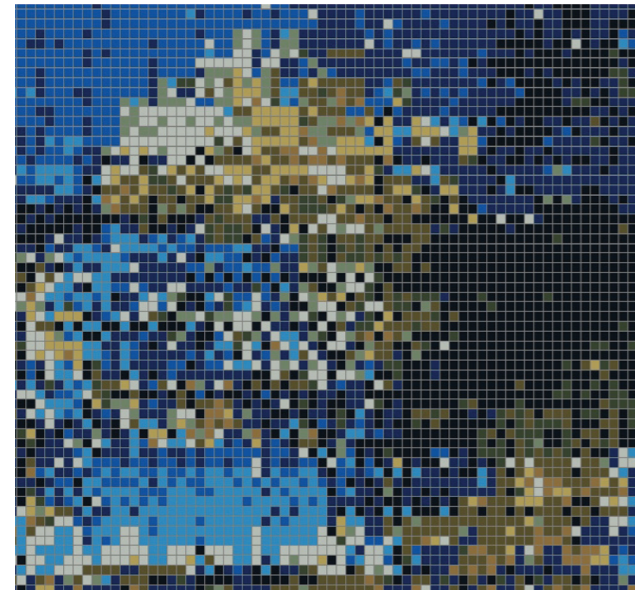

8. CLEANING

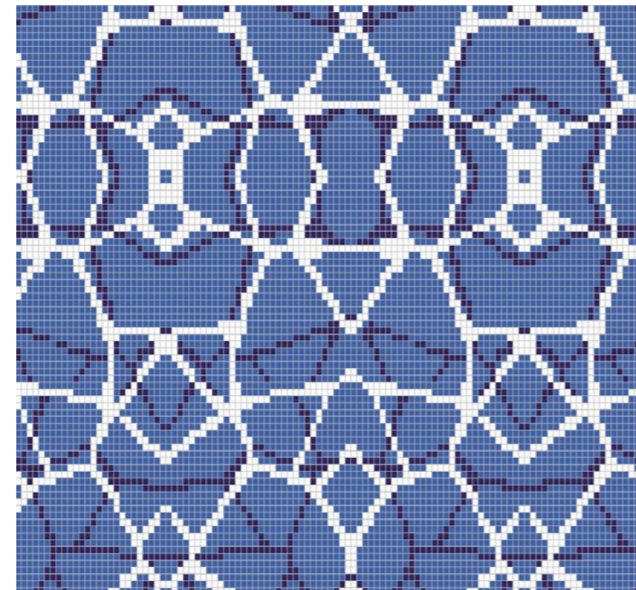

Clean the surplus paste with a hard cellulose sponge soak in clean water after grouting for 10-15 minutes. Rinse the sponge with clean water repeatedly and continue the process until all surface are completely clean.

Note :

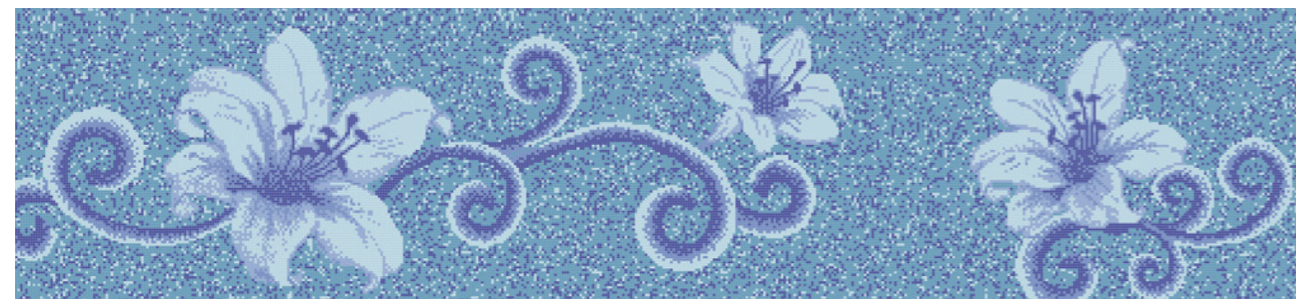

- Do not use abrasive materials, such as steel wire brush or sand paper to clean the surface, as this might cause the tiles surface to scratch.
- Do not use wax, oils, hydrofluoric, phosphoric or orthophosphoric acid for cleaning. Refer to the manufacturer's instruction regarding dosage and methods.
- For tiles / mosaic made with cold spray application to achieve vibrant colour effects or metallic finishing, we strongly recommend to use PH neutral adhesive and avoid using strong acidic based product for cleaning.
