Product Performance

MONTILE[®]

True-to-Nature Reproduction

Inspired by premium Grade-A natural stone. Using high-precision 3D laser scanning, we capture every detail of the original stone's texture, which is then faithfully recreated with CNC machining to replicate the authentic feel of natural stone.

Authentic Stone Texture

Our Italian 12-channel digital printing system, combined with automated color control and natural mineral powders, accurately reproduces a wide range of colors. With a resolution of 360 DPI, the tiles offer 6x greater clarity and 50x more texture detail than conventional options.

Eco-Friendly

With upscale textures and strong decorative appeal, these tiles are low-radiation, pollution-free, and certified safe—making them an ideal eco-friendly choice for public and residential spaces.

Supply Capacity

We supply a minimum of 5,000 m² per batch, delivered within 25–35 days. Multiple dedicated production lines ensure reliable supply for real estate partners.

3D Textured Surface

The 3D textured surface recreates the dimensional feel of natural stone. The raised, anti-slip design ensures safety and delivers outstanding overall performance.

High Load-Bearing Strength

Thanks to our proprietary high-wear resistance and hardness technology, the tiles are formed under high pressure and fired at high temperatures, achieving a flexural strength of 35 MPa and a breaking force of 7000 N.

Mica Mineral Crystals

Mica mineral crystals embedded in the surface refract sunlight, delivering a natural stone-like sparkle.

High-Temperature Slow Firing

Our unique high-temperature slow-firing process and specialized raw material formula result in a dense body with water absorption below 0.1%, offering excellent stain and corrosion resistance.

PROJECT CASE

Commercial block / living quarter /
pedestrian passage Municipal engineering /
tourist attraction / square

Widely used in municipal projects, tourist sites, and commercial streets, these granite tiles enhance urban landscapes with enduring beauty.
